

NEW PHONE BLACK AND WHITE 6/5S

Version: 1.0 / Available PSD Files: 16

HOW TO USE THIS PACK

Folders

The Files are organized in folders for easy localization of elements.

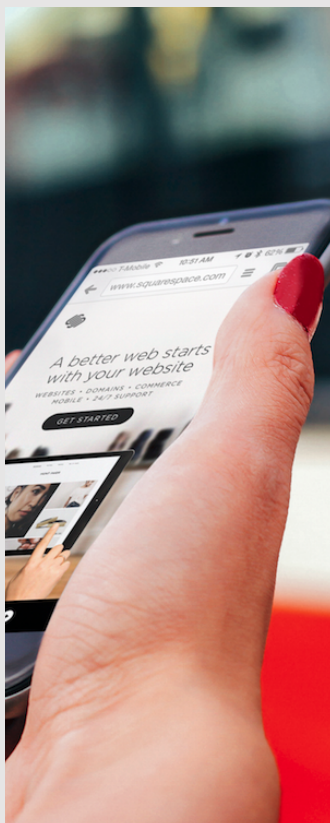

Placing your screenshot is really easy, just find the layer with the yellow eye activated and double click on this layer (smart object).

Place your screenshot in the pop-up window, save and close it. Automatically the screenshot will be placed in the phone images, with the lightning effects and textures to make it look realistic.

Tips

Customize your final results playing and tweking the screen upper layers. These gives the screen different looks to better fit your design colors. Bright, Constrast and Hue colors can be selected to get different results. All of these are available and you can turn on and off just by clicking on the eye icon.
